Eric -

I went over the HHRA comments looking at my suggested revisions, and they look fine. I noticed you kept the Yakama comment App F 7.4.2 p. 87 regarding combining upland and inwater risk. Because fish consumption drives risk, I wouldn't say that adding in upland risks will lead to a much higher estimation of overall risk, but I don't think it worth fighting this if you want to include it.

I have minor formatting comments. After removing omitted or duplicate comments, the following rows remain:

App F 5.2.8.3 pp 62-3
App F 7.2.2.2 p 80
App F 7.2.2.3 p 80

- Mike

Subject: Latest Version of Comments

Attached is the latest version of the comment table. We are still hoping to send the global comments out today so please provide any comments you may have by 2:00 pm today. We have given up on trying to get the SLERA and Problem Formulation for the ERA out today but instead are targeting Friday.

The table is large - 50 pages or so - so you will need to focus your review on specific elements of the report or comments.

We are planning on using Wednesday's TCT as a Round 2 Report Check-in. Please note also that we still have key elements of the report that we need to provide comments on including Sections 10 and 11, the food web model and BSAF development, TRVs for the ERA, the predictive model for benthic toxicity and general guidance on the FS. Right now I am thinking of a February 15, 2008 delivery date for these comments. I think the point here is that we will still need to keep focused on the Round 2 Report even after the general comments and ERA problem formulation go out.

Thanks, Eric
